Drafted by AI. Sent by You.

Blended Expert Readiness Storyboard · QuickBooks Online AI Invoicing & Payment Reminders

Project Title	**Drafted by AI. Sent by You.** QuickBooks Online AI Invoicing & Payment Reminders: Expert Readiness
Designer	Jonathan Iker Zamarripa
Date	October 2026
Product Feature	QuickBooks Online (US): Intuit Assist invoice drafting from a forwarded email or a photo (including handwritten notes), AI-drafted payment reminders, and the automatic reminder schedule
Modality	Blended: facilitator-led live demo huddle → scenario-based simulation (Articulate Storyline 360) → one-page job aid → spaced micro-reinforcement (7taps)
Expert Time	~44 min across 10 days: 20-min huddle (launch day) · 18-min simulation (within 48 hrs) · two 3-min micro-lessons (days 3 and 10)
Prototype	Clickable prototype with the produced cold open (slides 1, 6, 7 and Results): https://coach-line-18168657.figma.site/
Delivery	Virtual huddle (Zoom or Teams) · LMS, SCORM 2004 4th ed. · mobile micro-lessons · job aid in the Expert knowledge base + PDF
Readiness Level	Feature readiness: Apply. Experts arrive knowing QuickBooks invoicing; this builds the new AI layer on top.

How this storyboard is organized

Page 2	Design at a glance and how I built this
Part A	Design document: audience, business context, objectives, modality and rationale, approach, feedback strategy, proficiency, build specs
The Build	Stills from the produced 52-second cold open and screens from the working Figma prototype
Part B	Branching and scoring map, then the Storyline storyboard slide by slide (16 slides + Final Call variants)
Part C	Live demo huddle: facilitator script and run-of-show
Part D	Job aid: full content
Part E	Spaced reinforcement micro-lessons
Part F	Evaluation plan and QA observation checklist

[T] marks a template slide: product-agnostic structure that Intuit Academy can reuse for the next feature on any product.

DESIGN AT A GLANCE

THE PROBLEM	THE EXPERTS	THE DESIGN	THE PROOF
Intuit Assist now drafts invoices and payment reminders. When a customer sends a draft without checking it, or forgets reminders are on, they call an Expert upset and ready to turn the feature off.	QuickBooks Online Experts on phone, chat and messaging. New Experts need the words; tenured Experts need a reason to coach the review instead of retyping.	Blended: a 20-min live demo huddle, an 18-min Storyline scenario on one realistic call, a mid-call job aid, and two 3-min spaced follow-ups.	An unscaffolded Final Call (6 of 8 points, zero critical errors), a peer-scored teach-back, and QA observation of 2 real contacts within 14 days.

SEE IT · launch day	TRY IT · Acts 1–2	PROVE IT · Act 3	KEEP IT · days 3 & 10	MEASURE · days 15–45
Cold open, 4 changes, live Test Drive demo, 30-sec teach-back pairs	Mental model, worked example, Marisol's call: 4 decisions, error hunt, guided fix, reminder setup	Explain-back, Final Call with no coaching, results by objective with replay	Job aid in the knowledge base, 7taps retrieval, peer champions	Repeat contacts, handle time and CSAT on the AI-invoicing tag vs. a 2-week baseline

Three design decisions that matter most

- **Start with the mistake, not the feature.** The cold open shows what happens when a draft goes out unchecked. Every slide after it answers that scene.
- **Score accuracy and trust separately.** An Expert who is right but leaves the customer angry hasn't done the job. Two meters make that visible, and the Final Call fails anyone who makes a promise the product can't keep.
- **Build it once, reuse it everywhere.** About 70% of the slides are product-agnostic templates marked **[T]**. The next feature on TurboTax, Credit Karma or Mailchimp swaps content, not structure.

How I built this

I designed this storyboard and built a working prototype of it in two days, using the same AI-assisted production approach that cut development time 40% at Cox Enterprises. I started with Action Mapping: the business goal and the five behaviors, before any content. I researched the feature only from Intuit's own published material and drafted scripts and dialogue with Claude against those sources, editing every line for voice and accuracy. I directed the 52-second cold open as a short film: a shot list, a character and style bible, and continuity rules, generated shot by shot in Google Gemini Omni and finished with a branded end card. I then built slides 1, 6 and 7 and the Results screen as a clickable prototype in Figma Make, with a QuickBooks-style Expert workspace, interface sound design, a glossary and a resources panel. Where public information ran out, I didn't guess: those points are listed as questions for the SME. AI sped up the production; the design decisions, the review, and the judgment calls are mine.

Try the prototype: https://coach-line-18168657.figma.site/ (cold open, slides 1, 6, 7 and Results)

PART A · DESIGN DOCUMENT

Target Expert Audience

QuickBooks Online Experts who support US small-business owners by phone, chat and messaging, across QuickBooks Online plans that include invoicing.

Segment	What they bring	What they need from this
New Experts (under 6 months)	Know invoicing basics; still building product fluency and call confidence	Plain-language explanations, a review routine to coach, and words for an upset customer
Tenured Experts	Know invoicing deeply; may default to "just type it by hand" or distrust AI drafts	Why the feature is worth keeping on, and where AI drafts go wrong so they can coach the review
Both	Learn between queues in 20–30 min protected blocks; must answer in minutes, not after research	Short, modular practice; a job aid usable mid-call; clear escalation lines

Customer personas in the scenarios	Situation	Used in
Marisol Reyes, Reyes Landscaping	Photographs handwritten job notes on her truck at the end of the day; sends invoices fast	Practice scenario (Act 2)
Theo Park, Park Studio Photography	Forwards client emails to create invoices; has two clients with similar names	Final Call, variant A
Grant Whitfield, Whitfield Custom Builds	Long-time clients; an automatic reminder upset his biggest one, and he wants the AI "off"	Final Call, variant B (retake)

Business Context: What Changed and Why Expert Readiness Matters

Intuit Assist now drafts invoices and reminders inside QuickBooks Online. An invoice goes to a client only after the business owner reviews it and hits Send, and automatic reminders follow the schedule the owner turned on. Customers who skip the review, or forget the schedule is on, will call us. Intuit reports automated reminders got beta businesses paid about 5 days sooner on average, so Experts should help customers fix problems without switching the feature off.

What changed	What customers will say	What the Expert must do
Draft an invoice or estimate from a forwarded customer email or an uploaded photo, including handwritten notes (also on QuickBooks Mobile)	"QuickBooks made an invoice by itself?"	Explain that Intuit Assist drafts and the customer reviews and sends. The draft doesn't send on its own.
Invoice fields arrive pre-filled from the source document	"I wrote $480. It billed $4,800."	Coach the four-point review before Send: **Who, What, How much, When.**
Overdue invoices are flagged and Intuit Assist drafts a personalized reminder from the client's history and the invoice status	"It wrote to my client in a way I never would."	Show that every AI-drafted reminder can be edited before it goes.
Automatic reminders on a schedule: before, on and after the due date (Settings → Account and settings → Sales → Reminders)	"My client got three emails this week. Turn it off."	Adjust timing and wording first; explain what turning reminders off gives up.
Pay-now options on the invoice through QuickBooks Payments; payments recorded and matched automatically	"Do I still need to record the payment?" / "Why was I charged a fee?"	Explain auto-recording. Route fee and dispute questions to the QuickBooks Payments team.

What changed	What customers will say	What the Expert must do
Availability depends on plan and settings (US QuickBooks Online; per Intuit, invoice reminders are not offered in QuickBooks Online Advanced)	"I don't see this anywhere."	Check plan and settings before troubleshooting.

Performance Objectives (Action Mapping → Bloom)

Business goal: Experts resolve AI-invoicing contacts on first contact, and customers keep using the feature with a review habit instead of turning it off. Upon completion, the Expert will be able to:

#	Objective	Bloom	Practiced in	Proficiency shown by
1	**Explain** how Intuit Assist drafts an invoice from an email or photo, and what the customer stays in control of, in plain language	Understand	Huddle demo · Slides 3–5	Huddle teach-back · Slide 13 · Final Call
2	**Guide** a customer through reviewing an AI-drafted invoice (Who, What, How much, When) and correct errors before or after sending	Apply	Slides 7–8	Slide 7 hotspot · Final Call
3	**Diagnose** why a draft or reminder went wrong (photo quality, similar customer names, reminder schedule) and choose the right fix	Analyze	Slides 9–10	DP2 · DP3 · Final Call
4	**Configure** an automatic reminder schedule and edit an AI-drafted reminder to fit the client relationship	Apply	Slide 11	Slide 11 simulation · Final Call B
5	**Decide** when to keep, adjust or turn off a feature, and when to escalate (Payments fees and disputes), with no promises the product can't keep	Evaluate	Slide 12	DP4 · Final Call critical-error check

Chosen Modality and Rationale

Blended, built as **See it → Try it → Prove it → Keep it.** A demo alone creates awareness, not skill. A simulation alone skips the launch-day moment where a team sees the change together and asks its questions. Each piece below does one job.

Phase	Component	Format and time	Job it does
SEE IT	Live demo huddle	20 min · virtual · team lead or Academy facilitator (script in Part C)	Shared first look on launch day, live Q&A, and a peer teach-back that makes Experts say it out loud once
TRY IT	Scenario simulation	18 min · Storyline 360 · self-paced within 48 hrs (Part B)	Safe practice on a realistic call with consequences: find the errors, fix the invoice, set reminders, hold the escalation line
PROVE IT	Final Call + QA check	Inside the simulation, then 2 observed contacts in 14 days (Parts B and F)	Proficiency on an unscaffolded call, confirmed on the job
KEEP IT	Job aid + micro-reinforcement	1-page card in the knowledge base · 7taps on days 3 and 10 (Parts D and E)	Answer at hand mid-call; spaced retrieval to beat the forgetting curve

- Mirrors the real job: an upset customer, a live product screen, and decisions with consequences.
- Practice comes before proof: Act 2 is scaffolded with coaching; the Final Call removes it.
- Reusable for the supply chain model: about 70% of slides are product-agnostic templates (marked **[T]**). The next feature on any Intuit product swaps the content, not the structure.

- Self-paced, so it fits distributed teams and works later as a refresher.

Instructional Design Approach

Framework	How it shows up in this design
Action Mapping (Cathy Moore)	Started from the business goal (resolve AI-invoicing contacts on first contact without customers turning the feature off) and the five observable behaviors. Anything not tied to a behavior went to the job aid or out. Payments fee rates are routed, not taught.
Merrill's First Principles	Problem-centered from the first second (cold open) → activation (what Experts already know about invoicing) → demonstration (huddle demo, Slide 5 worked example) → application (Act 2 and the Final Call) → integration (teach-back, job aid).
Scenario-based learning (Clark)	Feedback arrives as consequences first. The customer's reply and the Trust meter move before any coaching note appears.
Cognitive load	One feature per scene. A worked example comes before each practice. Signaling (callouts, zoom) on the screens. Payments, plans and edge cases go to the job aid instead of the narration.
Spaced retrieval	Retrieval on days 3 and 10 after launch, each a single customer question to answer, not re-reading.
Kirkpatrick L1–L4	Evaluation plan in Part F, with a baseline taken two weeks before launch.

Instructional Flow at a Glance

SEE IT · Launch day Live demo huddle (20 min) Cold open · 4 changes · live demo · teach-back pairs	**TRY IT · Act 1** (S1–5) Cold open · what changed · mental model · worked example	**TRY IT · Act 2** (S6–12) Marisol's call: 4 decision points, spot-the-errors, guided fix, reminder settings	**PROVE IT · Act 3** (S13–16) Explain-back · Final Call (no coaching) · dashboard · job aid	**KEEP IT · Days 3 → 14** 7taps day 3 and 10 · job aid · QA observation of 2 contacts

Learner Interaction & Engagement Points

Interaction	Where	Why it engages
Cinematic cold open (45-sec story, no title)	S1 · Huddle	A real customer mistake before any content. Experts want to know who pressed Send.
Click-to-reveal tiles; drag-the-person mental model	S3–4	Active sorting of what the AI does vs. what the customer controls, not passive reading
Phone or chat channel choice	S6	Matches each Expert's real queue; same content, their channel
Live Trust and Accuracy meters	S6–12	Visible stakes: being right and leaving the customer confident are tracked separately
Spot-the-errors hotspot with zoom	S7	A detective task that builds the review habit customers need
Guided product simulation with "Say it" talk track	S8, S11	Hands on the real screens while rehearsing the words to use
Branching decisions with in-character replies	DP1–DP4	Consequences land in the customer's voice, not a "Correct!" banner
Typed explain-back + self-check	S13 · Huddle pairs	Saying it in their own words is the rehearsal for saying it on a live call
Poll, chat prompt, breakout teach-back	Huddle	Social learning on launch day; the team calibrates together

Practice & Application Opportunities

- **Worked example → guided practice → independent practice:** S5 shows it, S7–S11 coach it, S14 removes the coaching.
- **Seven scored practice moments** in Act 2 on one realistic call: 4 decision points, the error hunt, the invoice fix, the reminder setup.
- **Transfer practice:** a new customer and product situation in the Final Call (email-forward or reminders), so Experts apply the skill rather than recall Marisol's answers.
- **Live rehearsal:** the 30-second teach-back in huddle pairs, scored by a peer.
- **Spaced practice:** retrieval on days 3 and 10; on-the-job application observed by QA within 14 days.

Feedback Strategy

Type	Where	How it works
Consequence-first	Decision points (DP1–DP4)	The customer replies in character and the Trust meter moves, then a **Coach's note** explains why and gives model language ("Say it like this").
Corrective, specific	Hotspot, configuration and knowledge items	Each wrong choice gets its own explanation; nothing reads just "Incorrect."
Withheld for proof	Final Call (Slide 14)	No meters and no coaching during the call. Feedback for all four answers comes together on the results screen.
Summary + replay	Results dashboard (Slide 15)	Score by objective, with a one-click replay of any scene below 80%.
Peer, rubric-based	Huddle teach-back	Partner scores a 30-second explanation against three criteria (Part C).
Manager, on the job	QA observation (Part F)	Six-item checklist on two real contacts within 14 days, with coaching on the gaps.

How Proficiency Is Demonstrated

- **Two meters, two skills.** Act 2 tracks **Accuracy** (product correctness, 12 pts) and **Trust** (customer communication, 10 pts). Both are formative and shown on the dashboard.
- **Proficiency = the Final Call:** at least 6 of 8 points **and** zero critical errors. A critical error is telling a customer the AI sends on its own, promising an error won't happen again, or quoting Payments fees or rates.
- **Remediation:** a miss routes the Expert to the scene(s) tied to the missed objective plus the matching micro-lesson, then a retake with the other customer variant (Theo ↔ Grant), so it can't be passed by memory.
- **Reporting:** pass/fail, score and objective-level results go to the LMS through SCORM. The Slide 13 explain-back goes in as a fill-in interaction for coach review.
- **On the job (L3):** QA observes two tagged AI-invoicing contacts per Expert within 14 days (checklist in Part F).

Storyline Variables (Build Reference)

Variable	Type	Use
v_accuracy	Number 0–12	Act 2 product correctness. DP1 max 1 · Slide 7 max 3 · DP2 max 2 · DP3 max 2 · Slide 11 cadence max 2 · DP4 max 2
v_trust	Number 0–10	Act 2 communication. DP1 max 2 · Slide 8 +1 · DP2 max 2 · DP3 max 2 · Slide 11 tone +1 · DP4 max 2. Meter label: 0–1 Frustrated · 2–4 Uneasy · 5–7 Steady · 8–10 Confident (shown as words plus a fill bar).
v_errors_found	Number 0–3	Slide 7 hotspots found; adds 1 to v_accuracy each
v_channel	Text	"phone" or "chat", picked on Slide 6; swaps the call UI and audio vs. transcript

Variable	Type	Use
v_variant	Text	"theo" or "grant". Random on first attempt; flips on retake.
v_final	Number 0–8	Final Call score (4 items × 2 pts)
v_critical	True/False	Set True by any critical-error choice on Slide 14; forces fail
v_explain	Text	Slide 13 explain-back; reported as a SCORM fill-in interaction
v_attempt	Number	Attempt counter; drives the retake variant
v_obj1–v_obj5	Number	Points per objective, used for the dashboard bars and remediation routing

Accessibility and Build Specifications

- WCAG 2.2 AA: 4.5:1 text contrast; nothing conveyed by color alone. Meters show a number and a word label ("Frustrated / Uneasy / Steady / Confident").
- Closed captions and a downloadable transcript for the cold open and every narrated slide; narration at ~140 words per minute.
- Every hotspot has a keyboard-accessible alternative: a checklist of fields in tab order (Slide 7) and a form version of the reminder panel (Slide 11).
- Next stays locked until the interaction is complete; the seek bar is enabled on revisits.
- Screens are built from the QuickBooks Online Test Drive company with fictional data. No real customer data is used anywhere, including in AI-assisted drafting.
- All on-screen text is in Storyline text variables or the translation export, ready for Spanish (US) localization.

Interface Sound Design

Sound	When it plays	Why
Two-note chime	Incoming chat appears (Slide 6)	Same cue as the film's last shot; signals a real customer is waiting
Warm three-note rise	Expert selects Accept	Marks the hand-off from watching to doing
Soft pop · airy whoosh · faint ticks	Message received · reply sent · typing indicator	Makes the chat feel live without adding visual noise
Bright single bell	An error is found; points are added	Positive reinforcement tied to the review habit
Gentle low note	Missed items revealed on Done	Signals review needed without a punishing buzzer
Quiet swish · subtle tick	Panels open and close · primary buttons	Physical feel for the interface
Soft two-chord swell	Results reveal	Closes the experience on a calm, confident note

All sounds are generated in code (Web Audio API), start only after the learner's first click, stay silent while the video plays, and can be turned off from the title bar.

Production Plan (10 working days, AI-assisted)

Day 1	Design document review with the Product SME and Expert Readiness lead; confirm the open questions below
Days 2–3	Scripts and dialogue (first drafts AI-assisted from the source help content, then edited); Test Drive screen capture; cold-open shot list
Days 4–7	Storyline build, huddle deck, job aid, 7taps lessons

Day 8	QA: accuracy against the live product, accessibility, LMS and SCORM test; SME sign-off
Day 9	Pilot with 6–8 Experts (mix of new and tenured); fix list
Day 10	Launch: huddles run, simulation assigned, job aid published

AI is used for first drafts of dialogue and narration from Intuit's source help content only. Every product claim is checked against the live product and signed off by the SME. No customer data goes into any AI tool.

Seat-Time Budget (simulation)

S1 0:45	**S2** 0:30	**S3** 1:30	**S4** 1:00	**S5** 1:15	**S6** 1:00	**S7** 1:30	**S8** 1:30
S9 1:00	**S10** 1:00	**S11** 1:30	**S12** 1:00	**S13** 1:30	**S14** 1:30	**S15** 1:00	**S16** 0:30 · **Total 18:00**

Media and Asset List

Asset	Count	Notes
Cold-open film	1 × 52 sec (produced)	Five shots generated in Google Gemini Omni from a written shot list and character bible, plus a branded title and end card. Captions and transcript. Stills on The Build page.
Interface sound effects	11 (produced)	Generated in code with the Web Audio API: incoming-chat chime, accept tone, message pop, send whoosh, typing ticks, found bell, missed tone, panel swish, button tick, results swell. Muted during video; learner can turn off.
Worked-example screen recording	1 × 60 sec	QuickBooks Online Test Drive, fictional data, zoom callouts on the four review points. Reused as the huddle's backup demo.
Narration clips	15	One per narrated slide, about 140 words per minute; script in the Narration column.
Character voice lines	~14	Marisol (8 lines) and Grant (4 lines, phone variant); chat variants use text bubbles.
Product screen captures	~12	Invoice draft, invoice edit, Save and send, Reminders settings, AI-drafted reminder, Payments deposit line.
Character portraits	4	Marisol, Luis, Theo, Grant. Illustrated, consistent style, diverse and fictional.
Job aid	1	One-page card in the knowledge base plus a PDF (Part D).
7taps micro-lessons	2	Days 3 and 10 (Part E).
Huddle deck	6 slides	Reuses the cold open, Slide 3 tiles and the teach-back rubric.

Version and Review Log

Version	Date	Owner	Status
0.9	Oct 19, 2026	J. Zamarripa	Design document and storyboard draft
1.0	Oct 20, 2026	J. Zamarripa	Cold open produced (52 sec); clickable prototype of slides 1, 6, 7 and Results built in Figma Make; submitted for assessment
1.1	Day 1 of build	Product SME · Expert Readiness lead	SME review of design and open questions (pending)

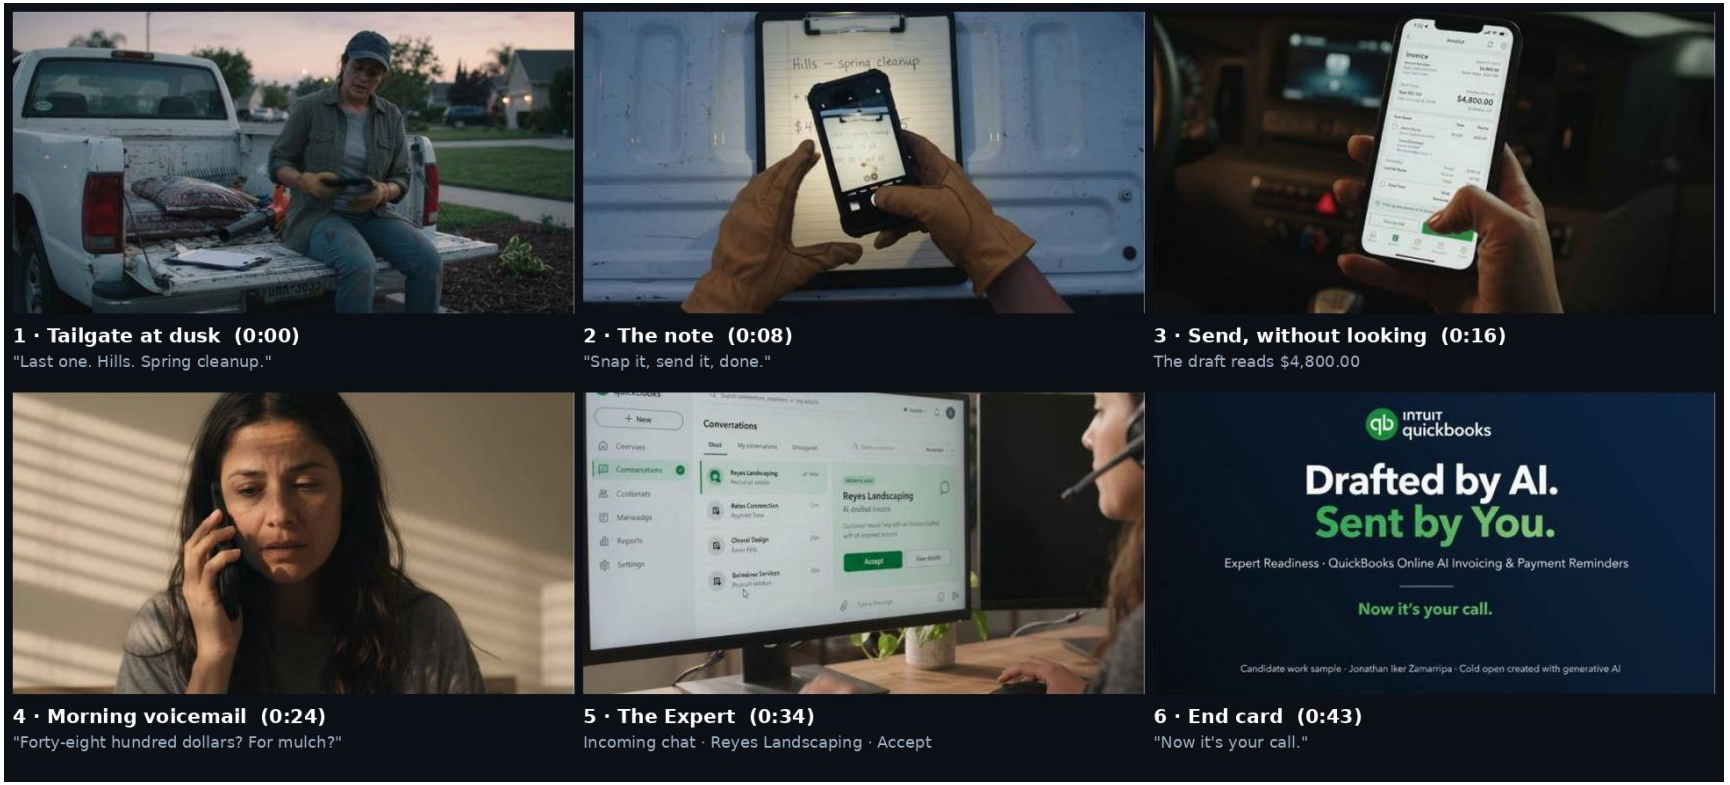

Version	Date	Owner	Status
1.2	Day 8	QA · SME	Accuracy, accessibility and SCORM QA; sign-off (pending)
1.3	Day 9	Pilot group (6–8 Experts)	Pilot fixes before launch (pending)

Assumptions and Questions for the SME

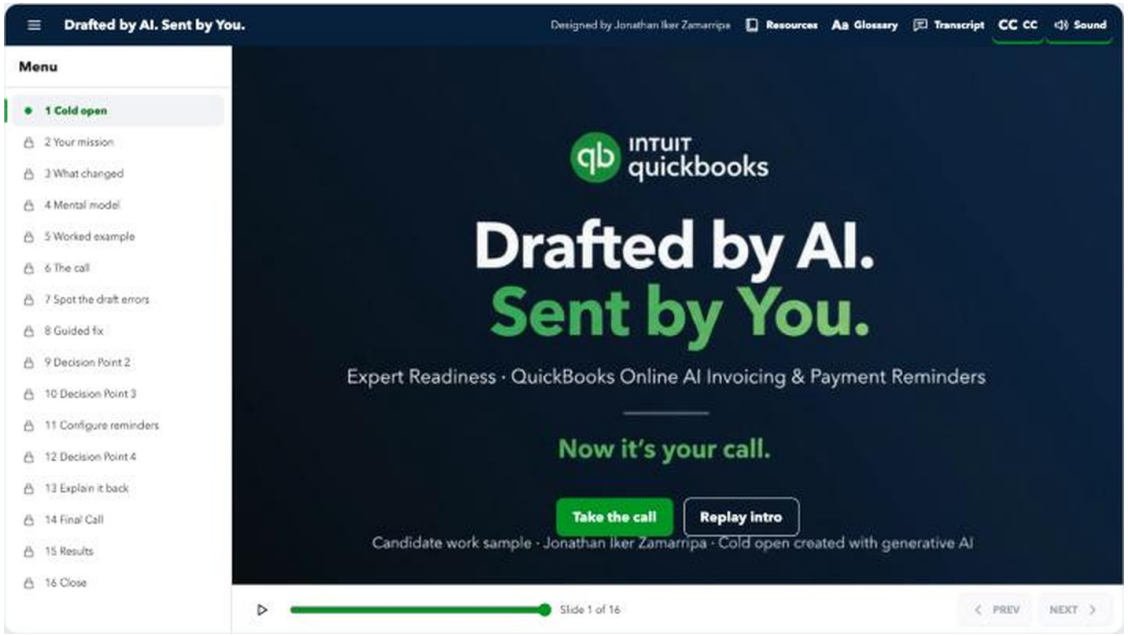

1. Confirm current labels and click-paths for email-forward and photo-to-invoice in QuickBooks Online and Mobile. Labels here follow Intuit's public help content; final screens come from the Test Drive company.
2. Confirm plan availability: Payments AI is listed from Essentials up, and per Intuit, invoice reminders are not in QuickBooks Online Advanced.
3. Confirm the escalation path and warm-transfer wording for QuickBooks Payments fee and dispute questions.
4. Can Experts see the customer's screen (co-browse or screen share)? The storyboard works either way: Experts guide verbally on phone and with screenshots in chat.
5. Is AI voice (TTS) approved for internal training? If not, narration is recorded by a staff voice; the script doesn't change.

THE BUILD · PRODUCED COLD OPEN AND WORKING PROTOTYPE

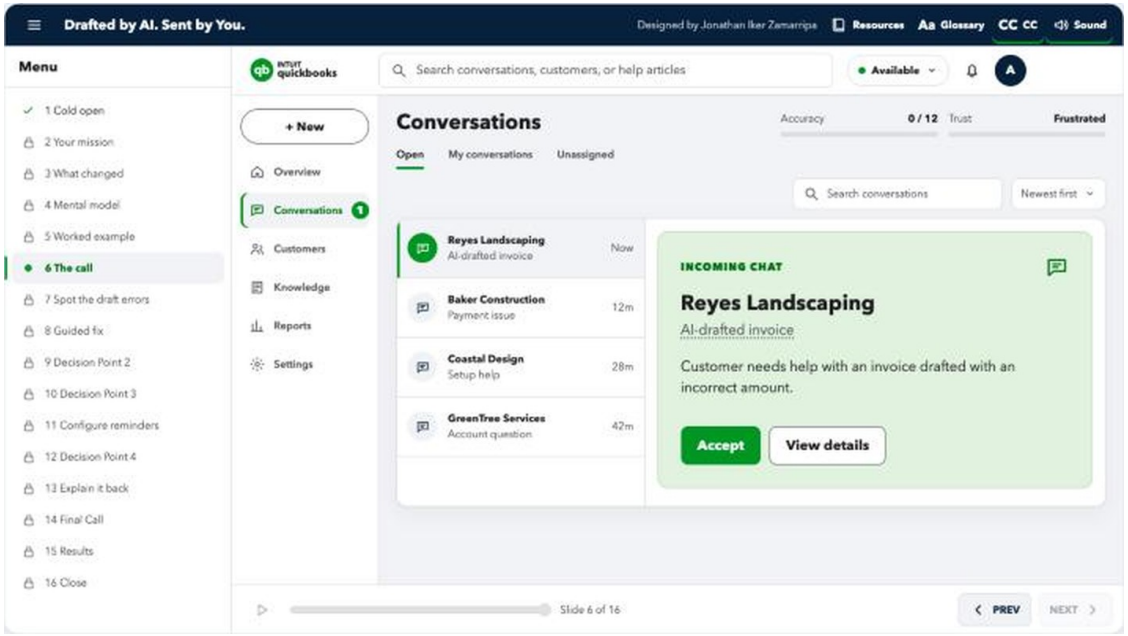

Everything on these pages was produced, not mocked up. Try it: https://coach-line-18168657.figma.site/

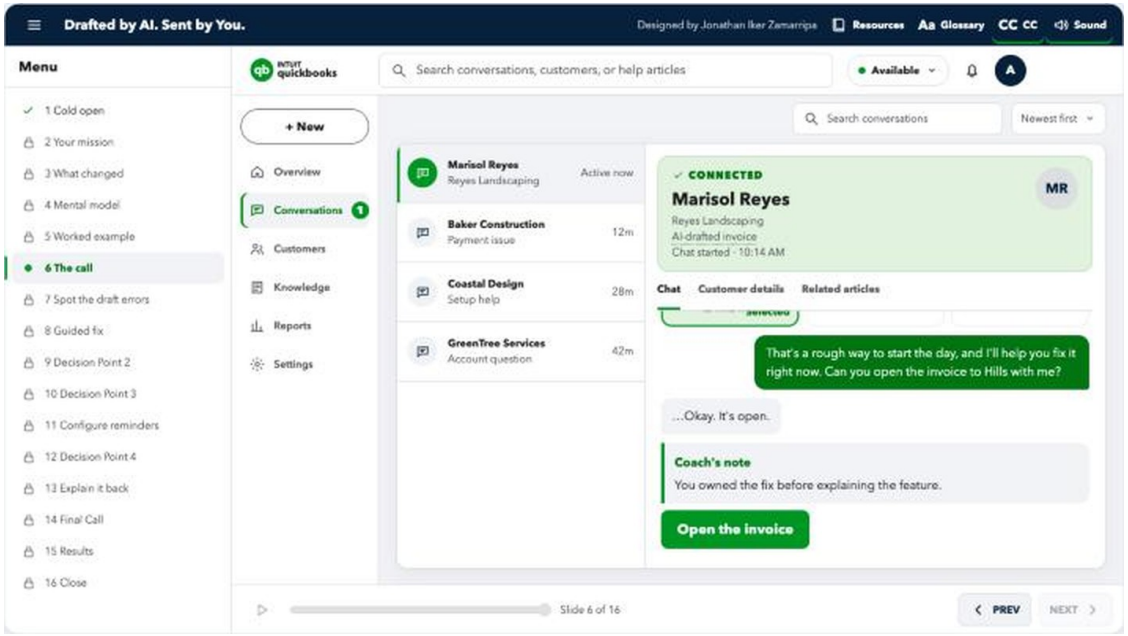

Cold open, 52 seconds. Five shots generated in Google Gemini Omni from a written shot list and character bible, then a branded end card that hands off to the learner.

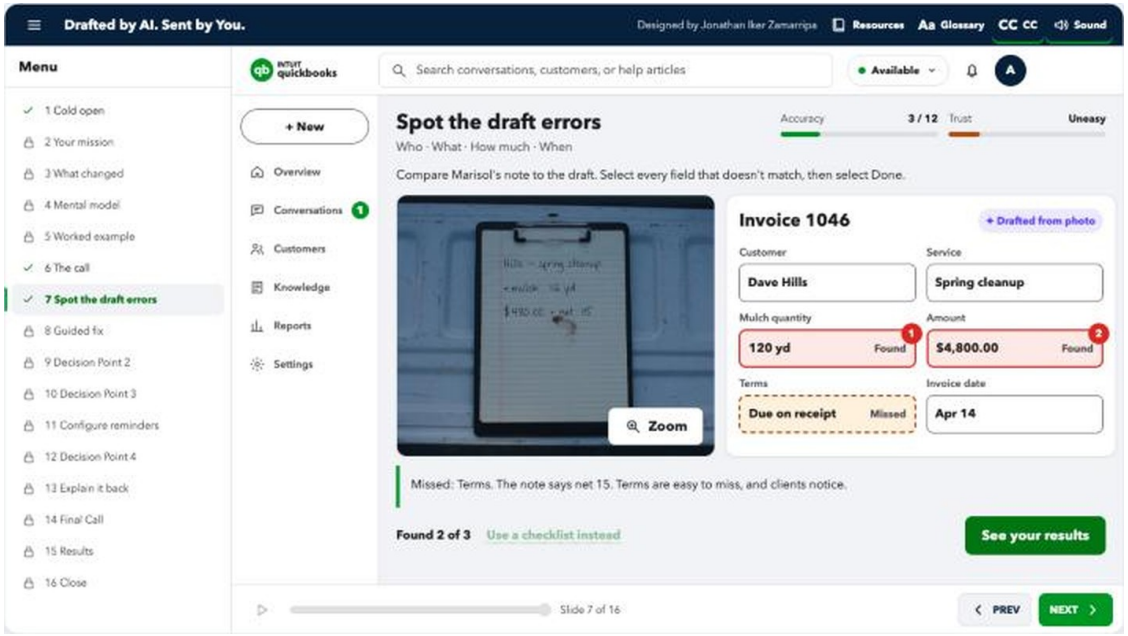

Slide 1 · End of the cold open. "Take the call" starts the learner's part of the story.

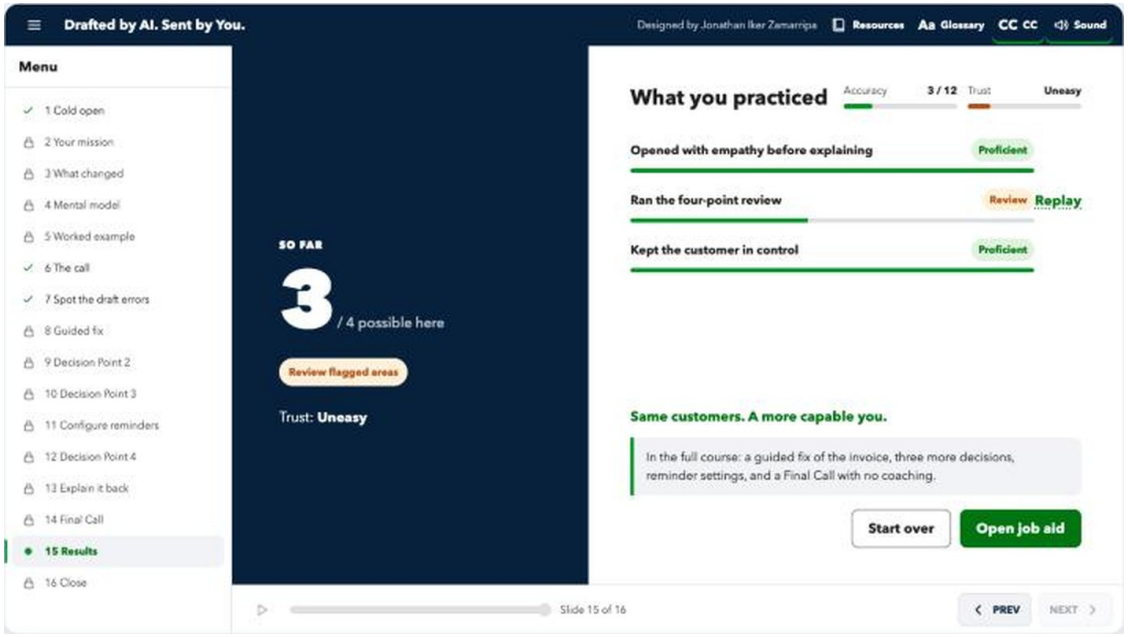

Slide 6 · The Expert workspace. The incoming chat from Reyes Landscaping, matching the film's last shot.

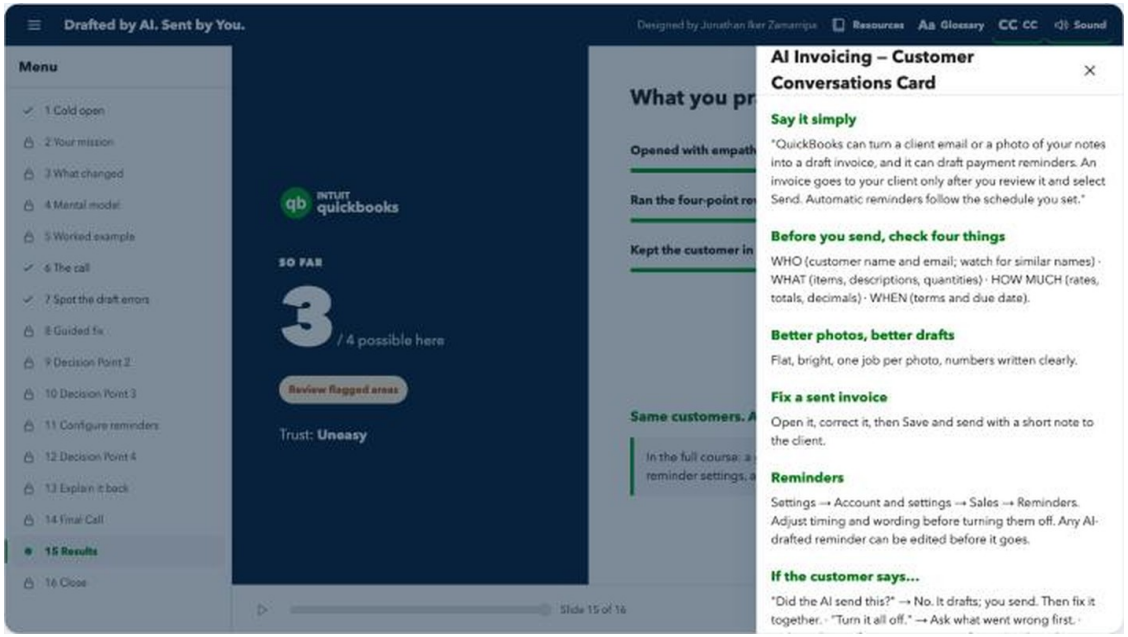

Slide 6 · After Decision Point 1: the Expert's reply, Marisol's answer, then the coach's note. Meters update.

Slide 7 · Spot the draft errors after Done: found errors pinned in red, the missed one flagged amber with its explanation.

Results · Score by skill, with Replay on anything below proficient.

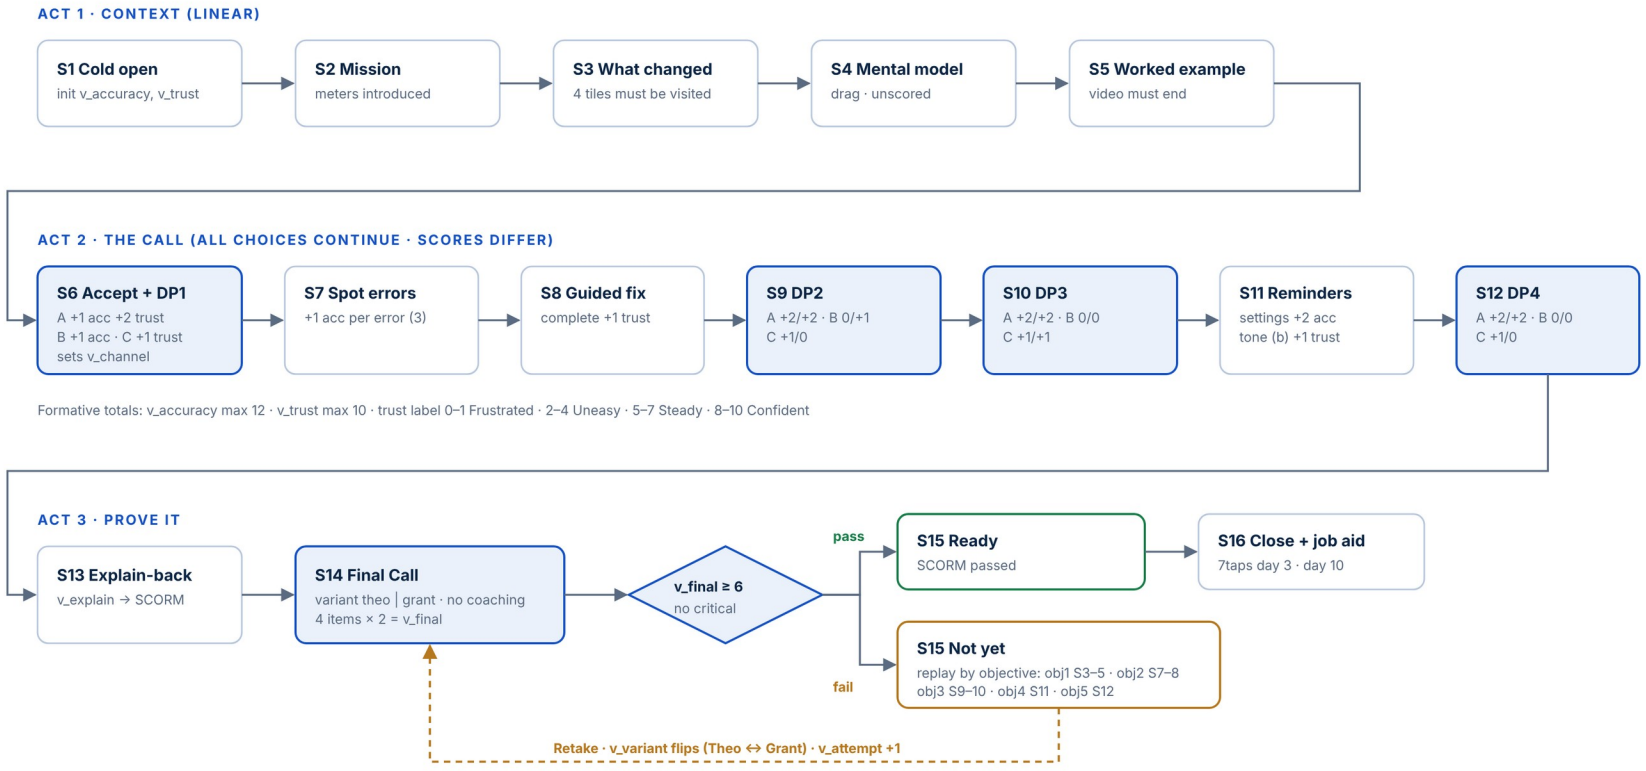

Resources · The job aid opens inside the player, beside the glossary, transcript and Intuit help links.

PART B · STORYBOARD: SCENARIO SIMULATION (Articulate Storyline 360)

BUILD REFERENCE

Branching and scoring map

Build reference · Articulate Storyline 360

Branching and scoring map (Slide 6 now opens with Accept, matching the film). Every choice in Act 2 continues; scores differ. Only the Final Call gates proficiency.

ACT 1 — COLD OPEN & CONTEXT

Slide	Screen / Visuals	On-Screen Text	Narration / Audio	Learner Interaction	Branching / Variables	Feedback
1 [T]	**Cold open film, 52 sec (produced; stills on The Build page).** 0:00 Tailgate at dusk: Marisol, end of a long day. 0:08 The note: she photographs "Hills — spring cleanup / + mulch 12 yd / $480.00 · net 15"; a thumb smudge lands by the total. 0:16 Truck cab: the QuickBooks mobile draft reads $4,800.00; she taps Send without looking and closes her eyes. 0:24 Next morning: voicemail from Dave Hills. 0:34 The Expert: incoming chat from Reyes Landscaping; she clicks **Accept**. 0:43 Title and branded end card.	End card: **Drafted by AI. Sent by You.** / Expert Readiness · QuickBooks Online AI Invoicing & Payment Reminders / **Now it's your call.** / Candidate work sample line	Character dialogue only, no narrator: MARISOL: "Last one. Hills. Spring cleanup." / "Snap it, send it, done." / "Done." DAVE (voicemail): "Marisol, it's Dave Hills. Forty-eight hundred dollars? For mulch? Call me back." SFX: crickets, shutter, whoosh, phone buzz, chat chime, mouse click. Captions on by default; transcript in Resources.	Poster with a green **Play intro (0:52)** button; no autoplay with sound. **Skip intro** pill. At the end (or on skip): **Take the call** and **Replay intro** over the end card.	Initialize: v_accuracy = 0, v_trust = 0, v_attempt += 1. v_variant random if v_attempt = 1. Take the call: Slide 1 complete, NEXT unlocks → Slide 6.	None.
2 [T]	Expert desk POV: headset, two monitors. Two meters slide in at the top right: **Accuracy** and **Trust**.	**Your call: get Marisol paid, correctly.** By the end you'll be able to: • Explain how Intuit Assist drafts invoices and reminders • Coach the 4-point review before Send • Fix a wrong draft and reset reminders • Know when to keep, adjust, or escalate Two meters track your call: **Accuracy** (are you right?) and **Trust** (does the customer feel helped?). About 18 minutes.	"In the next eighteen minutes you'll take a real-feeling call about QuickBooks' new AI invoicing. Two things matter: being right, and leaving the customer confident. We'll measure both."	Click **Start**.	None.	None.
3 [T]	**Before / Now split screen.** Left (grayscale): a hand typing an	**What changed**	"Invoicing used to be all manual. Now QuickBooks	Click all 4 tiles; each opens a layer with three lines: **What**	Next locked until all 4 tile states = Visited.	Each tile shows a checkmark when visited. Tooltip on Tile 4:

Slide	Screen / Visuals	On-Screen Text	Narration / Audio	Learner Interaction	Branching / Variables	Feedback
	invoice; sticky notes reading "chase Hills??". Right (color): four tiles. 1) Draft from email 2) Draft from photo 3) Smart reminders 4) Pay now + auto-record.	Before: type every invoice, chase every late client by hand. Now: Intuit Assist drafts. The customer decides. Click each tile.	can draft invoices and reminders for your customers. Here's what's new. Open each tile."	**it does / What the customer controls / Where it lives**. Tile 1: Forward a client email to QuickBooks; Intuit Assist drafts an invoice or estimate. / Review and send. / Invoicing. Tile 2: Upload or snap a photo, even handwritten notes. / Review and send. / QuickBooks Online and Mobile. Tile 3: Overdue invoices flagged; reminders drafted from client history. / Edit any draft; set the schedule. / Settings → Account and settings → Sales → Reminders. Tile 4: Clients pay from the invoice; payment recorded and matched. / Payment options. / QuickBooks Payments.		"Fees and disputes go to the Payments team. You'll practice that hand-off."
4 [T]	**Mental model graphic.** Six connected steps: Capture → Draft → Check → Send → Remind → Get paid. A person icon floats beside the flow.	**AI drafts. Customer decides. Expert explains.** Drag the person icon to every step where the customer is in control.	"Here's the picture to keep in your head, and to give customers. The AI does the drafting. The customer controls the moments that matter. Where are those?"	Drag-and-drop: person icon onto steps. Correct drop targets: **Check, Send, Remind** (reminder schedule and wording). Keyboard alternative: checkboxes beside each step.	Unscored (formative). Submit enabled after 1+ drop.	Correct: "Right. The customer reviews the draft, presses Send, and controls reminder timing and wording." Missed Remind: "Close. Customers also control when reminders go and what they say." Dropped on Draft: "The AI drafts. The customer reviews what it drafted."
5 [T]	**Worked example (60-sec screen recording, Test Drive company).** Forward a client email → draft invoice appears → zoom callouts on Customer, Line items, Amount, Terms → one edit (quantity) → **Review and send**.	**Watch it work** The 4-point review before Send: **WHO** customer and email **WHAT** items and quantities **HOW MUCH** amounts, decimals **WHEN** terms and due date	"Watch a draft go from email to invoice. Notice where the person slows down: who it's going to, what's on it, how much, and when it's due. That ten-second check is what you'll coach."	Video with **Replay**. Next unlocks at video end.	None.	Callout captions on each review point.

ACT 2 — THE CALL (scaffolded practice)

Slide	Screen / Visuals	On-Screen Text	Narration / Audio	Learner Interaction	Branching / Variables	Feedback
6	**Expert workspace** in QuickBooks style (built; see The Build): logo, search, green **Available** pill, left nav with Conversations active, conversation list (Reyes Landscaping · Baker Construction · Coastal Design · GreenTree Services). Meters top right. **Step 1 Incoming:** card "INCOMING CHAT · Reyes Landscaping · AI-drafted invoice" with **Accept** and **View details**, picking up exactly where the film ends. **Step 2 Connected:** Marisol Reyes · Chat started · tabs Chat / Customer details / Related articles. **Step 3 Chat:** typing indicator, then her message and Decision Point 1.	**Decision Point 1: How do you open?** Marisol: "I didn't type $4,800. Your AI did. My best client thinks I'm ripping him off. I want this AI stuff turned off." A. "That's a rough way to start the day, and I'll help you fix it right now. Can you open the invoice to Hills with me?" B. "The AI only drafts. You must have sent it without checking." C. "I'm sorry about that. I can show you how to turn Intuit Assist off."	Chat channel (text bubbles). Phone variant voices Marisol's line. SFX: incoming-chat chime on load, accept tone, typing ticks, message pop, send whoosh.	Click **Accept** (or **View details** first). Then select A, B or C; the reply posts as the Expert's message. **Related articles** opens the job aid.	A: v_trust +2, v_accuracy +1 B: v_trust +0, v_accuracy +1 C: v_trust +1, v_accuracy +0 All paths → **Open the invoice** → Slide 7.	**Consequence first**, then the coach's note. A: Marisol: "...Okay. It's open." Meter → Uneasy. *Coach:* "You owned the fix before explaining the feature." B: Marisol: "So it's my fault?" Meter stays at Frustrated. *Coach:* "True, but blame closes her down. Fix first, explain later." C: Marisol: "Fine. But Hills still has the wrong invoice." *Coach:* "Turning it off doesn't fix the invoice, and she loses the tool. Fix first."
7 [T]	**Split screen.** Left: Marisol's note, the same clipboard still from the cold open, with **Zoom**. Right: the AI-drafted invoice. Six fields are clickable: Customer · Service description · Mulch quantity · Amount · Terms · Invoice date. Drafted invoice shows: Customer **Dave Hills** ✓ · Spring cleanup ✓ · Mulch **120 yd** ✗ · Amount **$4,800.00** ✗ · Terms **Due on receipt** ✗ · Date ✓	**Spot the draft errors** Compare the note to the draft. Click every field that doesn't match. When you think you've found them all, click **Done**.	"Before you fix anything, find everything. Compare the note to the draft. Who, what, how much, when."	Hotspot clicks on fields. **Zoom** button on the photo. **Done** button. Keyboard alternative: checklist of the six fields.	Each correct field: v_errors_found +1, v_accuracy +1 (max 3). Wrong field click: no penalty; shows feedback. SFX: bell on each find, neutral click on a matching field, low tone on missed items. Done with fewer than 3: shows the missed ones.	Quantity: "12 became 120. Handwritten digits are the most common misread. Zoom the photo." Amount: "The note says $480.00; the draft says $4,800.00. Check every decimal." Terms: "The note says net 15; the draft says due on receipt. Terms are easy to miss and annoy clients." Correct field clicked: "This one matches the note." End card: **"Who · What · How much · When. That's the review you'll teach her."**
8	**Guided simulation** in the QuickBooks invoice (Test Drive capture): open the sent invoice	**Fix it together**	"Walk her through it one step at a time, and tell her what she'll see	Click-through simulation; each step highlights the next control. Message box:	Steps 1–4 complete → v_trust +1.	On send: Hills' reply pops in: "Ha, phew. Paying today." Trust

Slide	Screen / Visuals	On-Screen Text	Narration / Audio	Learner Interaction	Branching / Variables	Feedback
	→ edit Mulch qty 120 → 12 → amount recalculates to $480.00 → Terms → Net 15 → **Save and send** → message box. "Say it" speech bubbles appear at each step.	1. Open the Hills invoice 2. Correct the quantity (12 yd) 3. Set terms to Net 15 4. Save and send, with a note Say it: "Let's change the quantity to twelve, and you'll see the total fix itself."	before she clicks."	choose a note to the client: (a) "Corrected invoice attached. Apologies for the error. Total is $480." (b) "QuickBooks AI made a mistake."	Note (a) recommended; (b) allowed, coached.	meter rises. If (b): *Coach:* "Blaming the tool makes her client trust her books less. Keep the note about the fix."
9	Back to the call. Marisol, calmer, with a worried look. Trust meter visible.	**Decision Point 2: "Will it do this again?"** Marisol: "How do I know this won't happen next time?" A. "It drafts from what it sees, so a flat, bright photo with clear numbers helps a lot. And before you hit Send, check four things: who, what, how much, when. I'll send you that checklist." B. "It learns from corrections, so this won't happen again." C. "If you're worried, typing invoices yourself is safer."	Marisol's line voiced or in chat.	Select A, B or C, then **Respond**.	A: v_accuracy +2, v_trust +2 B: v_accuracy +0, v_trust +1 C: v_accuracy +1, v_trust +0	A: Marisol: "Who, what, how much, when. I can do that." *Coach:* "Two fixes she controls: a better photo and a 10-second check." B: Marisol: "Great!" *(meter rises, then drops a notch)* *Coach:* "Never promise what the product can't guarantee. It sets up the next angry call." C: *Coach:* "Accurate, but it throws away the time savings. Teach the review instead."
10	Marisol scrolls her phone. Notification preview: *"Reminder: Invoice 1047 is due soon."* Insert: her client Janelle's text: *"3 emails this week? We've worked together 10 years!"*	**Decision Point 3: Diagnose** Marisol: "While I have you: Janelle got three payment reminders this week. I never wrote those." A. "Those come from automatic reminders. They're on and set to go before, on, and after the due date. Let's look at the timing and the wording together." B. "That sounds like a bug. I'll report it." C. "I'll turn all your reminders off."	Narrator: "New problem, same call. What's actually happening?"	Select A, B or C, then **Respond**.	A: v_accuracy +2, v_trust +2 → Slide 11 B: v_accuracy +0, v_trust +0 → coach, then Slide 11 C: v_accuracy +1, v_trust +1 → coach, then Slide 11	A: *Coach:* "Right diagnosis: it's a setting, not a bug." B: *Coach:* "Check settings before calling it a bug. This one is configured behavior." C: *Coach:* "Off means her overdue invoices get no follow-up at all, the thing that gets her paid faster. Adjust first."
11 [T]	**Simulated settings panel:** Settings → Account and settings → Sales → **Reminders.** Toggle: Automatic invoice reminders (On). Three reminder rows with	**Configure it with her** Marisol wants: one friendly heads-up **3 days before** the due date, and one follow-up **7 days after**. Nothing	"Turning it off throws away the time it saves her. Tune it instead."	Set rows: Row 1 = 3 days Before · Row 2 = 7 days After · Row 3 = Off. Click **Save**. Then pick a reminder	Settings exactly right: v_accuracy +2. One row wrong: +1. Otherwise +0. Reminder (b): v_trust +1. Form-based keyboard	Settings correct: "Saved. Janelle gets two touches, not three." Wrong row: highlight the row plus her request. (a): "Fine for most clients, but

Slide	Screen / Visuals	On-Screen Text	Narration / Audio	Learner Interaction	Branching / Variables	Feedback
	a days field and a Before/On/After selector. Then an AI-drafted reminder to Janelle in an edit box.	on the due date. Then choose the reminder wording for Janelle.		version: (a) AI draft as-is: "This is a reminder that invoice 1047 for $1,250.00 is due on Oct 30." (b) Edited: "Hi Janelle, quick heads-up that invoice 1047 is due Oct 30. Thanks as always! Marisol" (c) "FINAL NOTICE: payment required."	version available.	for a 10-year client, a personal line protects the relationship. She can edit any draft." (b): "That's her voice, and it's still a reminder." (c): "Wrong tone for a reminder before the due date."
12	Marisol: "Last thing." Shows the QuickBooks Payments deposit line for Hills.	**Decision Point 4: Hold the line** Marisol: "Hills already paid the $480 online. Why was there a fee taken out?" A. "Payment fees are handled by our QuickBooks Payments team, and they can see exactly what was charged. I'll connect you now and note everything we fixed, so you won't have to repeat it." B. "Online payments are usually around 3%, so that's normal." C. "I can't help with fees."	Narrator: "Not every question is yours to answer. The hand-off still matters."	Select A, B or C, then **Respond**.	A: v_accuracy +2, v_trust +2 B: v_accuracy +0, v_trust +0 *(critical-error pattern)* C: v_accuracy +1, v_trust +0 → Close-out, then Slide 13	A: Marisol: "Thanks. And I'm keeping the AI on." Meter → **Confident.** *Coach:* "A warm transfer with a summary. That's the line." B: *Coach:* "Never quote fees or rates. Plans differ, and a wrong number becomes a dispute. Route it." C: *Coach:* "Right boundary, cold delivery. Connect her, don't leave her." **Close-out card:** Marisol's three outcomes: invoice fixed ✓ reminders tuned ✓ AI kept on ✓

ACT 3 — PROVE IT

Slide	Screen / Visuals	On-Screen Text	Narration / Audio	Learner Interaction	Branching / Variables	Feedback
13 [T]	Marisol's crew lead **Luis** leans into frame on her video call.	**Explain it back** Luis: "So what does this AI thing actually do?" Type 2–3 sentences, the way you'd say it to a customer.	"If you can explain it simply, you understand it. Answer Luis."	Text entry (required, 20+ characters). Then a self-check of three boxes: ☐ Said it drafts from an email or photo ☐ Said the invoice doesn't send until they review it ☐ Gave one review tip (who, what, how much, when)	v_explain = text (SCORM fill-in interaction). Self-check stored per box. Unscored.	After submit, the model answer appears beside theirs: "QuickBooks can turn a client email or a photo of your notes into a draft invoice. The invoice doesn't go out until you check it and hit Send. Just look at who it's to, what's on it, how much, and when it's due."
14a–d	**FINAL CALL. No meters, no coaching.** Header: "This one counts." Variant A shown here (Theo Park, chat). Variant B (Grant Whitfield) is below and uses the same structure. Each item: customer message → 3 responses → next item, no feedback until Slide 15.	**14a.** Theo: "I forwarded my client's email and QuickBooks made an invoice to *Lin Wedding Co.* instead of *Lin & Ortiz Events*. Did it already send?!" ✓ A. "Drafts don't send on their own. Let's check if it's still a draft and change the customer before you send." × B. "Yes, forwarding sends it automatically." **(critical)** ◐ C. "You should merge your duplicate customers first." **14b.** Which field does Theo check first on this draft? ✓ A. Customer name and email × B. Invoice number ◐ C. Line item descriptions **14c.** Theo: "Can I trust it next time?" ✓ A. "Yes, with a 10-second check: who, what, how much, when. Forwarding the email that has your client's full business name helps too." × B. "It learned from this, so it won't happen again." **(critical)** ◐ C. "It's usually right."	Narrator (intro only): "No coaching this time. Show what you've got."	One selection per item; **Submit** each. No back button.	✓ = 2, ◐ = 1, × = 0 → v_final (max 8). **(critical)** choice → v_critical = True. Pass = v_final ≥ 6 AND v_critical = False. Objective tags: 14a obj 1 · 14b obj 2 · 14c obj 3 · 14d obj 4/5.	Held for Slide 15.

Slide	Screen / Visuals	On-Screen Text	Narration / Audio	Learner Interaction	Branching / Variables	Feedback
		14d. Theo: "Another client is 20 days late. Do I have to write the reminder myself?" ✓ A. "QuickBooks flags it as overdue and can draft a reminder from the invoice. You review and edit it before it goes. Want me to show you where?" ◐ B. "Yes, reminders are manual." × C. "QuickBooks emails reminders automatically, even if you never turned reminders on."				
14 (B)	**Variant B: Grant Whitfield, phone.** Shown on first attempt if v_variant = grant; used for retakes.	**B1.** Grant: "Your AI emailed my biggest client a reminder and he called me furious. Shut it off." ✓ "Let's look at what went out and when, then set it so your top clients get a personal heads-up instead." × "The AI decided to send it." **(critical)** ◐ "Done, all reminders are off." **B2.** Where do you go to change the timing? ✓ Settings → Account and settings → Sales → Reminders × Customers list ◐ Invoice template **B3.** Grant: "Can it write them more like me?" ✓ "You can edit any drafted reminder before it goes, so add your own line." ◐ "No, it's automatic." × "It'll copy your tone after a few weeks." **(critical)** **B4.** Grant: "And there's a weird fee on his payment." ✓ Warm transfer to Payments with a summary ◐ "Can't help with fees." × Quote a rate **(critical)**	Same as 14a–d.	Same as 14a–d.	Same scoring and critical-error logic.	Held for Slide 15.
15 [T]	**Results dashboard.** Final Call result (large). Five objective bars from v_obj1–5. Act 2 meters shown as a reflection. Green = proficient; amber = review. Each bar carries a text label too.	**Pass:** "Ready for AI invoicing contacts." Final Call __ / 8 Accuracy (practice) __ / 12 · Trust (practice) __ / 10	Pass: "You were right, and you left the customer confident. That's the job." Not yet: "Two minutes of review, then a fresh call."	**Review my answers** (all Final Call feedback with ✓ rationale). **Replay** buttons on amber objectives. **Retake** (Not yet only).	SCORM: score = v_final/8; status passed/failed. Retake → v_variant flips → Slide 14. 		Not yet: "Close. Review the flagged scenes, then take a new call." Critical error triggered: shows which line and why it's critical.			5 → S12.	
16 [T]	Closing card. Marisol's truck, morning light, invoice app open; she zooms on the photo before tapping Send. Job aid thumbnail.	**Drafted by AI. Sent by you. Explained by an Expert.** • AI drafts; customers review and send • Coach: who, what, how much, when • Tune reminders before turning them off • Route fees and disputes with a warm transfer • Never promise it won't happen again Download: **AI Invoicing — Customer Conversations Card** Look for 2 quick follow-ups on days 3 and 10.	"Marisol checks before she sends now. Because you showed her how."	**Download job aid. Finish.**	SCORM: completed. Schedules 7taps enrollment (days 3 and 10).	None.

PART C · LIVE DEMO HUDDLE: FACILITATOR SCRIPT

Launch-day team huddle, 20 minutes, virtual. Run by a team lead or Academy facilitator from this script. Reuses the cold-open video and Slide 3 tiles, so it costs no extra production.

Facilitator prep

- QuickBooks Online Test Drive company open; sample client email and a photo of a handwritten note ready to upload
- Backup: the Slide 5 screen recording, in case the live demo fails
- Breakout rooms set for pairs; job aid link ready to paste in chat

Time	Segment	Facilitator says / does	Screen	Expert action
0:00–2:00	Hook	Play the cold open. Ask in chat: **"What went wrong, and who pressed Send?"** Read two answers aloud.	Cold-open video	Chat response
2:00–4:00	What changed	"Four things are new." Walk the tiles in one line each. Land the model: **AI drafts. Customer decides. Expert explains.**	Tiles + mental model	Listen
4:00–10:00	Live demo	Click-path: (1) forward a client email → draft appears → pause on **Who, What, How much, When** → edit one field → Review and send. (2) Upload the handwritten-note photo → zoom on the numbers. (3) Settings → Account and settings → Sales → Reminders → set 3 days before / 7 after → open an AI-drafted reminder → edit one line. Talk track: "Watch where I slow down. That's what you'll coach."	Live Test Drive	Poll at 7:00: "Which field would you check first on a photo draft?"
10:00–15:00	Teach-back pairs	Breakouts of 2. Each Expert explains the feature to their partner as if to a customer, in **30 seconds**. The partner scores 3 checks: drafts from email/photo · the invoice doesn't send without review · one review tip. Swap.	Rubric on screen	Explain + score a partner
15:00–18:00	Edge cases	Seeded questions: "I don't see it" (plan and settings) · "Turn it off" (tune timing first) · "Fee on a payment" (warm transfer to Payments). Then open questions.	FAQ slide	Ask questions
18:00–20:00	Close	Assign the simulation (due in 48 hrs), post the job aid link, introduce the two pilot Experts as the team's AI-invoicing champions, who answer peer questions in the team channel for the first two weeks.	Next-steps slide	Click the link

PART D · JOB AID (1 page, knowledge base card + PDF)

AI Invoicing — Customer Conversations Card

Say it simply: "QuickBooks can turn a client email or a photo of your notes into a draft invoice, and it can draft payment reminders. An invoice goes to your client only after you review it and hit Send. Automatic reminders follow the schedule you set."

Before you Send	Check
WHO	Customer name and email (watch similar names)
WHAT	Items, descriptions, quantities
HOW MUCH	Rates, totals, decimals
WHEN	Terms and due date

- **Better photos, better drafts:** flat, bright, one job per photo, numbers written clearly.
- **Reminders:** Settings → Account and settings → Sales → Reminders. Adjust timing before turning off. Any AI-drafted reminder can be edited before it goes.
- **Fix a sent invoice:** open it, correct it, Save and send with a short note to the client.

If the customer says...	Do this
"Did the AI send this?"	No. It drafts; the customer sends. Then help them fix it.
"I don't see this."	Check plan and settings. Reminders aren't in QuickBooks Online Advanced.
"Turn it all off."	Ask what went wrong first. Usually timing or wording fixes it.
"Why is there a fee?"	Warm transfer to QuickBooks Payments with a summary. Don't quote rates.
"Will this happen again?"	Don't promise. Teach the 4-point review.

Never say: "The AI sent it." · "It won't happen again." · "It's around X% in fees."

About this prototype	Candidate work sample note: AI-generated cold open; concept screens, not internal Intuit applications; fictional data

Glossary (searchable; terms underlined in the slides open their entry)

Term	Definition
AI-drafted invoice	An invoice Intuit Assist pre-fills from a forwarded email or an uploaded photo. It stays a draft until the customer reviews it and selects Send.
Automatic reminders	Payment reminder emails QuickBooks sends on a schedule the customer sets: before, on, or after the due date.
Critical error	A Final Call response that would cause real harm: saying the AI sent an invoice on its own, promising an error won't happen again, or quoting fees.
Due on receipt	Invoice terms that make payment due as soon as the client receives the invoice.
Expert	A QuickBooks support professional who helps customers by phone, chat and messaging.
Four-point review	The check before sending any AI draft: Who, What, How much, When.
Intuit Assist	The generative AI assistant inside QuickBooks that drafts invoices, estimates and reminders for the customer to review.
Net 15	Invoice terms that give the client 15 days from the invoice date to pay.
Proficiency	Passing the Final Call with at least 6 of 8 points and no critical errors.
QuickBooks Payments	The service that lets clients pay invoices online by card or bank transfer; payments are recorded in QuickBooks automatically.
Warm transfer	Handing a customer to another team while staying on to introduce the issue, so they don't repeat themselves.

PART E · Spaced Reinforcement (7taps)

When	Lesson	Content (3 min)	Purpose
Day 3	"Which number?"	Photo of a handwritten note with a smudged total next to the AI draft. Q: "What do you tell the customer to check first?" (How much). Then a 1-line tip: zoom the photo.	Retrieval of obj 2
Day 10	"Turn it off!"	Customer quote: "These reminders are annoying my clients. Turn it off." Choose the best reply from 3 (tune timing and wording first). Then one tap: "Have you had this call yet?" Yes/No (feeds the readiness lead's dashboard).	Retrieval of obj 4–5

PART F · Evaluation Plan

Level	Measure	When
L1 Reaction	3-question pulse at the end of the simulation and after the huddle: relevance, confidence (1–5), one thing still unclear	Immediately
L2 Learning	Final Call pass rate and score by objective; explain-back samples reviewed by the readiness lead	Launch + 48 hrs
L3 Behavior	QA observation of 2 tagged AI-invoicing contacts per Expert (checklist below)	Within 14 days
L4 Results	Against a 2-week pre-launch baseline: repeat contacts within 7 days on AI-invoicing issues · average handle time on the tag · CSAT on the tag · transfers that should have been resolved	Days 15–45

QA observation checklist (L3)

☐ Acknowledged the customer's concern before explaining the feature
☐ Explained that Intuit Assist drafts and the customer sends
☐ Coached the review (who, what, how much, when) or fixed the draft with the customer
☐ Tuned reminders before turning them off, where reminders came up
☐ Routed Payments fees and disputes with a warm transfer and a summary
☐ Made no promises the product can't keep and quoted no fees
